EDUCATION

B.S. Data Science — Purdue University

SKILLS

AI/ML: TensorFlow, Scikit-learn, NLP, Computer Vision, Hugging Face; **Languages:** Python, JavaScript, Java, Dart, SQL; **Frameworks:** React, Node.js (Express), Django, Laravel, Flutter, Agentic Frameworks; **Cloud:** Google Cloud, AWS, Azure; **Databases & Tools:** PostgreSQL, Firebase, Git, Figma;

AWARDS & HONORS

Outstanding Student in Data Science – Purdue University (2025-2026)

- One of four students recognized among thousands of Data Science students for exceptional academic performance, project impact, and leadership within the Purdue community

LangLegacy – IBM Z × UNSA Sheridan Hackathon 2026, Top 5 Finish (2026)

- Awarded Top 5 for building an audio-first endangered language preservation platform powered by IBM Watsonx.ai and recognized for alignment with UN SDGs.

HealthEvo – Lion Hacks 2024, 1st Place Winner (2024)

- Awarded for innovation in healthcare through **AI-driven personalization** and accessibility-focused UX.

BrainBoostAI – KTHack 2024, 3rd Place Overall Winner (2024)

- Recognized for an intelligent learning pipeline leveraging NLP and speech-to-text integration

Health is Wealth – Future Hacks 6, Runner-Up (Popular Vote) (2024)

- Earned distinction for community engagement and computer vision application in digital wellness.

PROJECTS

Reinforced Learning Guided Navigation Control Research – AIDA3 (AI in Aviation), Purdue University x Wind Racers (January 2026 - Present)

- Developed a high-fidelity 3D simulation environment in ROS to train Deep Reinforcement Learning (DRL) algorithms for autonomous fixed-wing UAV flight.
- Designing specialized reward structures and state-space configurations to optimize autonomous navigation for high-speed pylon racing.
- Presented the created environment at the Spring Purdue Undergraduate Research Conference

Research Collaboration Platform – Purdue University Initiative (August 2025 - Present)

- Built an **AI-powered** web platform to revolutionize research collaboration between Purdue professors and students.
- Engineered automated student–project matching using **intelligent information extraction** and **designed real-time dashboards** for progress tracking and communication.
- Implemented secure **SSO authentication** and scalable **RESTful APIs** for seamless multi-user coordination.

Empowered 100+ potential research partnerships through **automation, centralized data pipelines, and smart collaboration workflows.**

LangLegacy – IBM Z × UNSA Sheridan Hackathon 2026, Top 5 Finish

- Built an audio-first endangered language preservation platform with AI-powered vocabulary extraction, community storytelling, and real-time chatrooms.
- Leveraged IBM Watsonx.ai (Granite), IBM Cloudant, Featherless AI (Qwen 2.5-72B), and faster-whisper to build a full-stack pipeline from raw audio to searchable dictionary entries.

Recognized for innovation in cultural preservation and alignment with UN SDGs 4, 10, and 11.4.

HealthEvo – Lion Hacks 2024, 1st Place Winner

- Built a **cross-platform diabetes management app** in Dart and Flutter, delivering personalized advice based on user health profiles.
- Integrated a **health analytics engine** and **community resource hub** to enhance chronic condition management.
- Designed an inclusive, user-friendly interface while addressing challenges in **data accuracy, engagement, and accessibility**

Awarded 1st Place for innovation and measurable healthcare impact, recognized for accessibility-focused UX and **AI-driven personalization.**

BrainBoostAI – KTHack 2024, 3rd Place Overall Winner

- Created an AI-driven study assistant that transcribes lectures, extracts key topics, and recommends personalized YouTube videos for improved learning retention.
- Leveraged **Google NLP entity analysis** and speech recognition to build an intelligent content recommendation pipeline.
- Learned **NLP pipelines, speech-to-text, and API integration**, while emphasizing user-centered design and iterative testing.

Recognized for combining NLP, speech-to-text, and API integration in an intuitive learning companion that boosts academic productivity.

Health is Wealth – Future Hacks 6, Runner-Up (Popular Vote)

- Engineered a **computer vision**-based fitness coach using **Python, OpenCV, and Mediapipe** to track form and count reps in real time.
- Delivered an engaging health-Stack experience promoting at-home fitness with precise motion tracking and analytics.

Earned Runner-Up for community engagement and innovative use of computer vision in digital wellness.

WORK EXPERIENCE

Urja IT Spaces — Intern, Software & Marketing Associate *Chicago, Illinois | Jun 2025 – Sept 2025*

- Designed and built generative 3D layouts for coworking spaces, enabling faster visualization of interior plans for prospective clients.
- Developed marketing content (digital assets, pitch decks, and interactive media) to showcase coworking facilities, contributing to a 15% increase in client engagement during the internship period.
- Built a customer inquiry management tool using Python and Google Sheets API, streamlining the process of tracking leads and automating responses
- Achievement: Delivered an integrated solution that cut manual tracking efforts by 30% and improved response times for client inquiries, enhancing overall customer satisfaction.

Mathnasium Learning Center — Math Instructor *Cupertino, CA | Sep 2023 – May 2024*

- Tutored K–12 students in algebra, geometry, calculus, and applied problem-solving, tailoring instruction to diverse learning styles.
- Assisted in developing interactive lesson plans and digital practice sets, boosting student engagement and measurable performance.
- Helped struggling high school students improve test scores by 20–25% through personalized study plans.
- Introduced peer-learning sessions that increased attendance and retention, recognized by the center director as a best practice.
